DNA ANALYSIS REPORT

Case No.: PBPD-2025-088142 | Document No.: 21

LOUISIANA STATE POLICE CRIME LAB — DNA SECTION

Case Number: PBPD-2025-088142
 Submitting Detective: Det. Renee Broussard, Badge #1887
 Date Submitted: October 4, 2025
 Date of Analysis: October 6–8, 2025
 Reporting Analyst: Forensic Scientist Monique Arceneaux, MS — DNA Section
 Lab Reference: LSP-DNA-2025-044103
 Method: STR (Short Tandem Repeat) typing — 20-locus CODIS panel

ITEMS SUBMITTED FOR DNA ANALYSIS:

Item #	Description	Source
CS-006-DNA-A	Swab of collar region — victim white t-shirt (outer surface)	Autopsy
CS-006-DNA-B	Swab of collar region — victim white t-shirt (inner surface)	Autopsy
REF-001	Buccal swab reference — DEREK FONTENOT	Booking (consent)
REF-002	Buccal swab reference — TRAVIS BELL	Booking (consent)
REF-003	Buccal swab reference — RYAN McCALL	Booking (consent)
VIC-001	Buccal swab reference — MARCUS WEBB (post-mortem)	Autopsy
NAIL-001	Clippings and swabs — victim right hand fingernails	Autopsy
NAIL-002	Clippings and swabs — victim left hand fingernails	Autopsy

RESULTS:

Item CS-006-DNA-A (Shirt Collar — Outer): A mixed DNA profile was detected. The major contributor is consistent with MARCUS WEBB (VIC-001 reference). A minor contributor profile was detected comprising epithelial (skin) cells. This minor contributor profile IS CONSISTENT WITH DEREK FONTENOT (REF-001) at all 20 STR loci examined. The probability of this profile occurring in a randomly selected unrelated individual from the African American, Caucasian, and Hispanic populations is less than 1 in 1 quadrillion (1×10^{15}). DEREK FONTENOT CANNOT BE EXCLUDED as the contributor of the minor DNA profile on the victim's shirt collar.

Interpretation: Epithelial cells — skin cells — from Derek Fontenot were deposited on the outer collar of Marcus Webb's shirt. This is consistent with physical grabbing or contact at the collar area, as might occur if an individual seized another by the shirt collar.

Item CS-006-DNA-B (Shirt Collar — Inner): DNA profile consistent with Marcus Webb only. No foreign DNA detected.

Items NAIL-001 and NAIL-002 (Victim Fingernails): A partial DNA profile was recovered from material beneath the victim's right-hand fingernails (NAIL-001). The profile is MALE and IS INCONSISTENT with the victim (Marcus Webb). The profile is INSUFFICIENT for a full individual identification but TRAVIS BELL (REF-002) CANNOT BE EXCLUDED as the source. Ryan McCall (REF-003) is excluded. Derek Fontenot (REF-001) is excluded. The left-hand nail material (NAIL-002) yielded no foreign DNA.

Interpretation: The victim scratched or clawed at an individual during the assault. The partial profile under the right-hand fingernails is consistent with Travis Bell, suggesting direct physical contact between the victim and Bell during the assault.

CAVEAT:

The fingernail profile is partial (7 of 20 loci recovered). While Travis Bell cannot be excluded, a definitive match cannot be declared. This profile should be considered supporting evidence rather than standalone identification evidence.
