FORENSIC SHOE ANALYSIS REPORT
 Case No.: PBPD-2025-088142 | Document No.: 22

Case Number:	PBPD-2025-088142
Examiner:	Forensic Examiner Patrice Delacroix — PBPD Forensic Services Unit
Evidence Item:	SE-001: Left Nike Air Force 1 Low sneaker — white/white, size 11 US
Source:	Recovered from DEREK FONTENOT during search warrant execution, October 4, 2025
Date of Examination:	October 6–8, 2025
Reference:	Crime scene shoe impression — Item CS-003

I. ITEM DESCRIPTION

SE-001 is a left-foot Nike Air Force 1 Low sneaker, white colorway with white sole, men's size 11 US. The shoe is in used condition with moderate wear to the outsole at the heel and lateral forefoot. The shoe was received in a paper evidence bag, sealed and initialed by Detective Broussard and CSI Tran.

II. BLOOD EXAMINATION

Visual examination of the outsole revealed a dark reddish-brown staining pattern on the heel and mid-sole region of the left shoe. Field presumptive testing (Modified Kastle-Meyer) returned POSITIVE for blood. The staining is concentrated at the heel strike zone and extends across approximately 40% of the outsole surface.

BLOOD TYPING: The blood on SE-001 was typed using ABO/Rh immunological testing. Result: BLOOD TYPE A POSITIVE (A+). The victim Marcus Webb's blood type was A+ (confirmed by Orleans Parish Medical Examiner and victim medical records). Derek Fontenot's blood type is O negative (O-), as confirmed by his medical records obtained under search warrant. The blood on Fontenot's shoe IS NOT HIS OWN BLOOD.

III. OUTSOLE PATTERN COMPARISON

The outsole pattern of SE-001 was compared to Crime Scene Item CS-003 — the partial shoe impression in blood photographed at the scene (Photo Log items 12–14). The Nike Air Force 1 Low outsole features a distinctive herringbone-pattern tread with concentric circle medallion pattern at the heel and forefoot pivot point.

COMPARISON RESULT: The partial impression from the crime scene IS CONSISTENT WITH the outsole pattern of SE-001 in all comparable features. The following pattern elements are in correspondence: (1) herringbone tread orientation at mid-sole; (2) heel medallion partial pattern; (3) outsole width measurement (approximately 10.5 cm at widest point). No features in the crime scene impression are INCONSISTENT with SE-001.

LIMITATION: The crime scene impression is partial — approximately 60% of the full outsole area is represented. Full individualizing comparison is not possible. However, the examiner finds the pattern correspondence sufficient to conclude that SE-001 CANNOT BE EXCLUDED as the source of the crime scene impression.

IV. CONCLUSIONS

- SE-001 (Derek Fontenot's left Nike Air Force 1) bears blood of Type A+, consistent with and not excluding victim Marcus Webb as the source. The blood is not consistent with the shoe's owner (Fontenot, blood type O-).
- The outsole pattern of SE-001 is consistent with the partial shoe impression recovered from the blood pool adjacent to the victim's body at the scene.
- The combination of A+ blood on the outsole and outsole pattern consistency with the crime scene impression supports the conclusion that SE-001 was present at the crime scene and was in contact with the victim's blood.
