SURVEILLANCE CAMERA ANALYSIS REPORT

Case No.: PBPB-2025-088142 | Document No.: 25

PBPB DIGITAL FORENSICS UNIT — SURVEILLANCE ANALYSIS

Case Number:	PBPB-2025-088142
Examiner:	Digital Forensic Examiner Brandon St. Amant / Forensic Analyst Keisha Morel
Systems Examined:	The Rusty Anchor DVR System (indoor + alley cameras)
Date Examined:	October 4–6, 2025
DVR Hardware:	Hikvision DS-7608NI-I2, 8-channel NVR, 2TB storage (Model: 2023)
DVR Location:	Back office, The Rusty Anchor, 712 Bourbon Street

I. INDOOR BAR CAMERA — KEY FINDINGS

The indoor camera covers the main bar area. Footage was intact and complete for the relevant period. Key timestamped observations:

Timestamp	Event Observed
~10:05 PM	Marcus Webb enters The Rusty Anchor through front entrance. Proceeds to bar.
~11:58 PM	Derek Fontenot, Travis Bell, and Ryan McCall approach Marcus Webb at bar.
~12:02 AM	Visible heated altercation — all three men in Webb's personal space. Fontenot pointing.
~12:07 AM	Bartender (Shannon O'Brien) intervenes. Altercation verbally de-escalates.
~12:45 AM	Travis Bell visible making gestures toward the back of the bar (back door direction).
1:15 AM	Marcus Webb exits through staff/back door.
1:16 AM	Derek Fontenot makes call on his phone (confirmed as call to Travis Bell, 1:16 AM).
1:18 AM	ALL THREE SUSPECTS — Fontenot, Bell, McCall — exit through back staff door together.
No return	None of the three suspects are seen re-entering the bar after 1:18 AM.

II. ALLEY CAMERA — FOOTAGE GAP ANALYSIS

The alley camera recorded continuously from 12:00 AM until 1:14 AM. The footage shows the empty alley with normal periodic foot traffic. At 1:14 AM, Marcus Webb is briefly visible approaching the staff door from the alley side (appearing to use the door from outside briefly, then re-entering — consistent with an earlier visit to the alley or accessing the door). At 1:15 AM the staff door opens and Marcus Webb exits into the alley.

THE FOOTAGE GAP: At 1:15:42 AM, the alley camera footage becomes corrupted — the image goes to digital noise (multi-colored pixel scatter) and then BLACK. This condition persists until 1:37:18 AM — a gap of exactly 21 minutes and 36 seconds. Upon resumption at 1:37 AM, Marcus Webb is visible on the ground in the alley, not moving.

III. FORENSIC EXAMINATION OF THE FOOTAGE GAP

The DVR system was physically examined and forensically imaged. Examination findings:

1. STORAGE MEDIA EXAMINATION: The hard drive was forensically imaged using an industry-standard write blocker. File system analysis revealed a DELETION EVENT in the file allocation table corresponding to the 1:15 AM – 1:37 AM period. The deletion timestamp recorded in the DVR's system log: 1:18 AM, October 4, 2025. The deletion was performed via the DVR's USER INTERFACE (not a hardware failure) and required physical access to the DVR unit.

2. PARTIAL DATA RECOVERY: Forensic data recovery tools recovered 4 minutes and 22 seconds of fragmented footage from the deleted period. This recovered footage shows: (a) At approximately 1:18–1:20 AM, three male figures entering the alley from the staff door direction. Resolution is insufficient for facial identification but body count and attire (one figure in a light-colored shirt, one in a darker top) is consistent with known suspect descriptions. (b) At approximately 1:22 AM, a brief fragment shows what appears to be a physical confrontation — multiple figures over a prone figure — but is too degraded for evidentiary use.

3. EXAMINER CONCLUSION: The 22-minute gap is NOT consistent with a mechanical failure or hardware malfunction. The deletion event was performed intentionally via user access to the DVR unit. The timing of deletion — occurring at 1:18 AM, precisely when the three suspects entered the alley — is consistent with a deliberate act to destroy evidence.

NOTE: The bar owner (Phillip Arceneaux) has stated the camera 'malfunctions sometimes.' No record of prior malfunction was found in the DVR event log. The deletion event at 1:18 AM is the only anomalous event in 60 days of system logs.
